

Message from the Vice-Chancellor

Prof. Geoffrey Muluvi, PhD
Vice-Chancellor

Today's ceremony is a culmination of a long struggle spanning many years, characterised by devotion and sacrifices. It is gratifying that this work has been rewarded through this ceremony today. I am aware, however, that the graduands have not walked this journey alone; it has been a partnership of purpose involving the students, staff, parents, guardians, families, sponsors and other benefactors. To them all, I say thank you and congratulations.

Today, SEKU is producing 823 graduates in various disciplines and at different levels. I wish to assure our stakeholders that these graduands have undergone requisite training and acquired skills and knowledge to fit in today's demanding and fast changing job market.

The University has continued to grow the number of student with each intake in tandem with our academic programmes and teaching facilities. We shall continue to develop new programmes, while at the same time reviewing and fine-tuning the existing ones in line with market needs. As a science and technology-focused institution, SEKU is engaged in numerous innovative research undertakings to provide practical solutions to societal problems. For this, we have partnered with different bodies, including local and international universities and research institutions in various disciplines.

"The University has continued to grow the number of student with each intake in tandem with our academic programmes and teaching facilities."
