

Abstract

The invention provides a production method of a fish scale garment hanging decoration. The production method aims to solve the problems that existing garment hanging decorations are not made of real fish scales, and coatings of DIY and plastic artificial fish scale garment hanging decorations contain inferior colloids and harmful tinting pigments to cause a series of adverse factors of poor surface evenness, low adhesive forces, large pollution discharge capacity, and high possibility of environment pollution caused by harmful gas released by inferior colloids. A brand-new garment hanging decoration made of real fish scales instead of artificial fish scales has the advantages that the smoothness, glossiness, plumpness and adhesive force of the fish scale garment hanging decoration are remarkably improved; as environment-friendly raw materials are blended into pure natural binding agents and pigments, the fish scale garment hanging decoration simultaneously has decorative, attractive, quality and collection values as well as a practical value and provides powerful support to the upgrading of garment hanging decorations.
